1. Claims 1-13 are presented for examination.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

or

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-13 are rejected under 35 U.S.C. § 102(e) as being anticipated by McDysan Pub. No. 2003/0115480.

4. As to claim 1, McDysan teaches the invention as claimed, including method of forwarding a packet comprising:

determining a logical grouping of a plurality of virtual private network tunnels based on a classification criterion (pages 2-4, paragraphs [0013, 0025 – 0032]);

classifying a received packet based on said classification criterion (pages 2-4, paragraphs [0025 – 0032]); and

based on a result of said classifying, using a selection algorithm associated with said logical grouping to determine one of said plurality of virtual private network tunnels on which to forward said packet (pages 2-4, paragraphs [0025 – 0032]).

5. As to claims 2 and 5, McDysan teaches selection algorithm is a table look-up algorithm; or traffic balancing algorithm (page 5, paragraph [0042]).

6. As to claim 3, McDysan teaches classifying said received packet comprises inspecting contents of said received packet (page 4, paragraph [0035]).

7. As to claim 4, McDysan teaches determining a logical sub-grouping of said plurality of virtual private network tunnels based on a further classification criterion; and further classifying said received packet based on said further classification criterion (pages 2-4, paragraphs [0025 – 0032]).

8. As to claim 6, McDysan teaches said virtual private network tunnels are defined

as Multi Protocol Label Switching label switched paths (page 5, paragraph [0046]).

9. As to claim 7, McDysan teaches said received packet has includes destination address and said selection algorithm involves determining a label for a network element having said destination address (page 4, paragraph [0036]).

10. Claims 8-13 have similar limitations as claims 1-7; therefore, they are rejected under the same rationale.
